Addepar Hiring Team
Addepar, Inc.
Remote, USA

Dear Addepar Hiring Team,

I am excited to apply for the Software Engineer Intern - Research position at Addepar. My background in machine learning, data analysis, and computational media gives me a unique perspective on building frameworks that extract insights from complex datasets. I am particularly interested in how AI-first engineering and high-performance computing can drive financial research at scale.

At Kenyon College, I combined programming with digital humanities to analyze patterns in media. In one project, I used PySceneDetect and unsupervised deep learning to classify editing styles across genres. In another, I built a retrieval-augmented film recommendation system that leveraged OpenAI's language models and API-driven data pipelines. Both projects required building frameworks for large-scale data processing and visualization, skills directly relevant to Addepar's research engineering team. My coursework in AI, software development, and data structures reinforced my ability to write clean, scalable code.

My experience extends beyond research. As a research assistant at the University of Chicago, I collaborated on a project improving supply-chain security with checksum verification. At Kenyon College's IT department, I developed a scheduling tool to optimize classroom maintenance workflows. These experiences strengthened my problem-solving skills and ability to navigate ambiguity, qualities necessary for success in research-driven software engineering.

This internship is an opportunity to contribute my analytical and programming skills while learning from Addepar's world-class engineers. In five years, I aim to develop AI-driven tools that optimize financial decision-making, and this role provides a crucial foundation. I would love the opportunity to bring my diverse skill set to your team.

Thank you for your time and consideration. I look forward to the possibility of discussing how I can contribute.

Sincerely,

Richard (Rick) Alvarez
