Hiring Manager
radius180
Cherry Hill, New Jersey

Dear Hiring Manager,

I'm writing to apply for the Help Desk Technician I role at radius180. As a recent graduate from Kenyon College with experience in IT support and a deep interest in computing, I'm eager to bring my technical and communication skills to your team.

At Kenyon's Library and Information Services, I supported classroom technology, prepared workstations, and ensured devices were properly recycled. I streamlined our scheduling process by writing a script that helped identify maintenance windows—a small project, but one that made a difference. I learned to troubleshoot under pressure, communicate clearly with colleagues, and stay organized during high-volume periods.

Outside the classroom, I've built open-source projects that blend creativity and code. Through my coursework in data structures, digital humanities, and software development, I've gained experience with Python, SQL, and basic hardware configuration. These skills have helped me better understand both the software and physical sides of tech.

What draws me to radius180 is your emphasis on relationships. I value patient, honest communication. I enjoy helping people, and I know that solving problems means more than just fixing machines—it means listening, following up, and keeping clients informed.

I'm excited to contribute to a team that values personal integrity and teamwork. I welcome the opportunity to grow through hands-on work and continued learning.

Thank you for considering my application. I'd be happy to discuss how I can support your clients and your mission.

Sincerely,

Richard A. Alvarez
