Hiring Manager
Health Center, Inc.
Brooklyn, NY

Dear Hiring Manager,

Every workplace depends on technology working seamlessly—until it doesn't. A crashed workstation, a misconfigured printer, or a forgotten password can bring productivity to a halt. That's where IT steps in, quietly restoring order. I love being part of that process.

At Kenyon College, I worked as an IT Assistant, troubleshooting software and hardware issues across campus. I configured workstations, assisted faculty with email and network issues, and maintained printers. I worked to make technology invisible—helping others focus on their work, not their tools. My passion for problem-solving extends beyond IT. I studied Film while taking courses in programming, statistics, and machine learning. My research on film editing styles and AI-driven recommendation systems reflects my drive to bridge technology and creativity.

Beyond IT support, I thrive in high-pressure, high-collaboration environments. On film sets, I adapted to changing needs, troubleshooted equipment failures under pressure, and made sure every department had what they needed. More recently, I provided IT support at the BDPA High School Coding Competition, managing testing environments, securing networks, and handling last-minute technical issues. Across roles, my goal has remained the same: to make technology work—so people can do their best work.

Health Center, Inc. serves a critical role in the community, and I'd be proud to support its mission by keeping its IT infrastructure running smoothly. Whether diagnosing hardware issues, supporting end users, or documenting solutions for future efficiency, I bring a problem-solving mindset and a commitment to service. I look forward to the opportunity to contribute to your team.

Sincerely,

Richard A. Alvarez
