Hiring Manager
Center for Family Life in Sunset Park
Brooklyn, NY

Dear Hiring Manager,

Technology should empower communities, not exclude them. As a Mexican American and a first-generation college graduate, I have seen firsthand how access to technology can shape opportunities. I am eager to support the Center for Family Life in Sunset Park's mission by ensuring staff have the I.T. resources they need to serve the neighborhood.

At Kenyon College, I worked as an I.T. Assistant, troubleshooting software and hardware issues across campus. I configured workstations, installed peripherals, and managed networked printers. My background in Film and Digital Humanities strengthened my technical skills, leading me to study machine learning, cybersecurity, and data-driven media analysis. I approach technology as a tool for problem-solving—whether diagnosing a faulty machine or optimizing workflows for efficiency.

Beyond campus, I have provided I.T. support for community initiatives, including the BDPA High School Coding Competition, where I managed testing environments and resolved network issues under time constraints. These experiences reinforced my ability to communicate technical concepts to non-technical users and work under pressure.

I am excited about the opportunity to apply my skills at the Center for Family Life, ensuring that staff have reliable technology to carry out their vital work. I look forward to the possibility of contributing to your team.

Sincerely,

Richard A. Alvarez
